COPPER & BRASSWARE

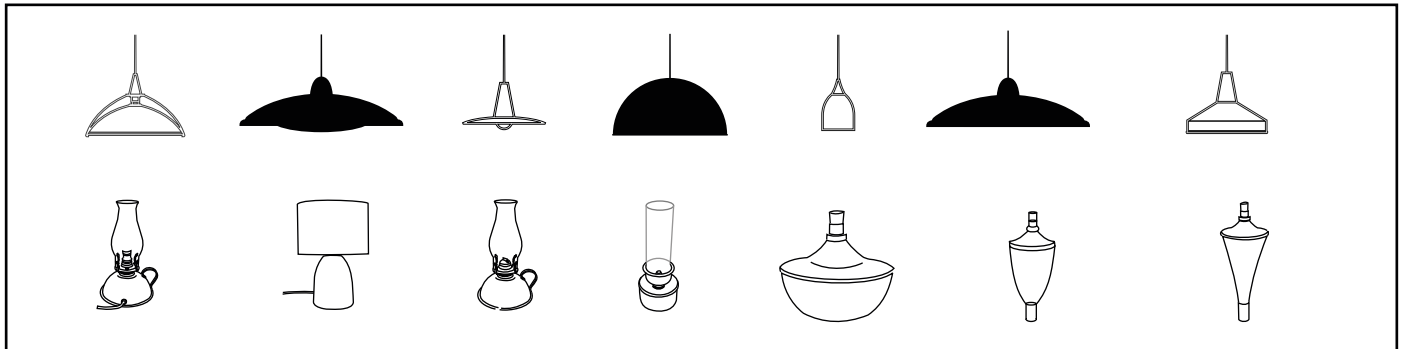

The name 2930 originates from the elemental composition of the metals we use to construct our products. 29 is the atomic number for Copper, and when Copper is smelted with Zinc (atomic number 30) the alloy Brass is created. Both Brass and Copper are the fundamental materials used in our range. The beauty of this range is not only found in its aesthetics but also in its manufacturing process. All of the 2930 range are hand spun by trained African craftsmen, giving them a unique touch otherwise unachievable with Modern automated
